The Arabic Manuscript Tradition - Adam Gacek 2017-07-31

This book, covering the entire spectrum of Arabic manuscripts, and especially the handwritten book, consists of a glossary of technical terms and a bibliography. The technical terms, collected from a variety of sources embrace a vast range of topics dealing with the making and reading (studying) of Arabic manuscripts. They are: the Arabic script, penmanship, writing materials and implements, the make-up of the codex, copying and correction, decoration and bookbinding, as well as the transmission of texts and former ownership. A similar coverage is reflected in the bibliography.

Exercising in Bed - Sanford Bennett 2013-09-05

Find more oldtime strength and fitness books at www.StrongmanBooks.com Sanford Bennett had become

an old man at the age of 50 suffering from lack of health. The doctors didn't help him so he devised a series of 35 different exercises, all of which could be done in bed. By the time he reached 70 years of age he became much younger. Even medical examinations seemed to prove this. Exercising in Bed covers exercises that are to be done before you even get up in the morning involving the contraction and relaxation of the muscles.

Plant Aging - Roberto Rodríguez 2012-12-06

For many, the terms aging, maturation and senescence are synonymous and used interchangeably, but they should not be. Whereas senescence represents an endogenously controlled degenerative programme leading to plant or organ death, genetic aging encompasses a wide array of passive degenerative genetic processes driven primarily by exogenous factors (Leopold, 1975). Aging is therefore considered a consequence of genetic lesions that accumulate over time, but by themselves do not necessarily cause death. These lesions are probably made more severe by the increase in size and complexity in trees and their attendant physiology. Thus while the withering of flower petals following pollination can be considered senescence, the loss of viability of stored seeds more clearly represents aging (Norden, 1988). The very recent book "Senescence and Aging in Plants" does not discuss trees, the most dominant group of plants on the earth. Yet both angiospermic and gymnospermic trees also undergo the above phenomena but less is known about them. Do woody plants senesce or do they just age? What is phase change? Is this synonymous with maturation? While it is now becoming recognized that there is no programmed senescence in trees, senescence of their parts, even in gymnosperms (e. g. , needles of temperate conifers last an average of 3. 5 years), is common; but aging is a readily acknowledged phenomenon. In theory, at least, in the absence of any programmed senescence trees should -live forever, but in practice they do not.

Translingual Identities and Transnational Realities in the U.S. College Classroom - Heather Robinson 2020-03-04

Exploring the roles of students' pluralistic linguistic and transnational identities at the university level, this book offers a novel approach to translanguaging by highlighting students' perspectives, voices, and agency as integral to the subject. Providing an original reconsideration of the impact of translanguaging, this book examines both transnationality and translanguality as ubiquitous phenomena that affect students' lives. Demonstrating that students are the experts of their own language practices, experiences, and identities, the authors argue that a proactive translingual pedagogy is more than an openness to students' spontaneous language variations. Rather, this proactive approach requires students and instructors to think about students' holistic communicative repertoire, and how it relates to their writing. Robinson, Hall, and Navarro address students' complex negotiations and performative responses to the linguistic identities imposed upon them because of their skin color, educational background, perceived geographical origin, immigration status, and the many other cues used to "minoritize" them. Drawing on multiple disciplinary discourses of language and identity, and considering the translingual practices and transnational experiences of both U.S. resident and international students, this volume provides a nuanced analysis of students' own perspectives and self-examinations of their complex identities. By introducing and addressing the voices and self-reflections of undergraduate and graduate students, the authors shine a light on translingual and transnational identities and positionalities in order to promote and implement inclusive and effective pedagogies. This book offers a unique yet essential perspective on translanguality and transnationality, and is relevant to instructors in writing and language classrooms; to administrators of writing programs and international student support programs; and to graduate students and scholars in language education, second language writing, applied linguistics, and literacy studies.

Handbook of Environmental Psychology - Robert B. Bechtel 2003-01-17

An international team of leading scholars explores the latest theories, research, and applications critical to environmental psychology. Featuring the latest research and concepts in the field straight from the world's leading scholars and practitioners, *Handbook of Environmental Psychology* provides a balanced and comprehensive overview of this rapidly growing field. Bringing together contributions from an international team of top researchers representing a myriad of disciplines, this groundbreaking resource provides you with a pluralistic approach to the field as an interdisciplinary effort with links to other disciplines. Addressing a variety of issues and practice settings, *Handbook of Environmental Psychology* is divided into five organized and accessible parts to provide a thorough overview of the theories, research, and applications at the forefront of environmental psychology today. Part I deals with sharpening theories; Part II links the subject to other disciplines; Part III focuses on methods; Part IV highlights applications; and Part V examines the future of the field. Defining the ongoing revolution in thinking about how the environment and psychology interact, *Handbook of Environmental Psychology* is must reading for anyone coping directly with the attitudes, beliefs, and behaviors that are destroying our environment and putting our lives in jeopardy. Topics include: * Healthy design * Restorative environments * Links to urban planning * Contaminated environments * Women's issues * Environments for aging * Climate, weather, and crime * The history and future of disaster research * Children's environments * Personal space in a digital age * Community planning

How to Attract Good Luck - A.H.Z. Carr 2014-01-30

Luck is not chance—it can be cultivated. This engaging guide shows how to attract “chance” opportunities, and avoid “bad luck,” in ways that will dramatically improve your life. Why do some people seem to have all

the luck? According to writer and economist A. H. Z. Carr, there's much more to luck than just the random caprices of fate—“luck” is an accessible mind-set that anyone can achieve. The difference between “chance” and “luck,” says Carr, lies in our mental attitude. Carr teaches readers how to develop their character and adjust their mind-set to pick out the opportunities for happiness and success that are available to us all, but which most unthinkingly pass by. This is no volume of superstition—this is a real guide for people who want to tap into the opportunities for a better life that surround us.

Core Topics in Airway Management - Ian Calder 2010-12-16

Every anaesthetist reaches the end of their career with a collection of difficult airway experiences. Managing airway challenges relies on a combination of good clinical practice, knowledge of relevant basic sciences and critical evaluation of every aspect of airway care. This new edition of *Core Topics in Airway Management* provides any trainee or consultant involved in airway techniques with practical, clinically relevant coverage of the core skills and knowledge required to manage airways in a wide variety of patients and clinical settings. All new procedures and equipment are reviewed, and detailed chapters advise on airway issues in a range of surgical procedures. This edition also contains a series of practical questions and answers, enabling the reader to evaluate their knowledge. Written by leading airway experts with decades of experience managing difficult airways, *Core Topics in Airway Management*, 2nd edition is an invaluable tool for anaesthetists, intensivists, and emergency physicians.

Noun+Noun Compounds in Italian - Radimský Jan 2015-12-28

This book investigates one concrete compounding pattern in present-day Italian within a larger overview of Italian compounding. Various accounts and classifications of Noun + Noun combinations in Italian are reviewed, with special focus on the status of the lexical integrity hypothesis. The author sets out to propose an integrated approach to the Noun + Noun compounding pattern, rigorously based on large representative data sets that were extracted from the Italian web corpus ItWaC as both automatically and manually post-processed frequency lists. On the basis of such data, it is aimed to show the behaviour of various subtypes of Noun + Noun compounds. Starting out with the Bisetto-Scalise classification, the author carefully examines the status of coordinate compounds, ATAP compounds (i.e., the group comprising attributive and appositive structures) and subordinate compounds (comprising verbal-nexus and grounding compounds), discussing both theoretical and empirical implications of this classification scheme. Moreover, the original Bisetto-Scalise model is supplemented with further classification levels in order to capture specific compounding types such as relational (i.e. inherently trinominal) compounds. A major merit of the present study lies in the quantitative dimension of the data it deals with. In light of this data, the author emphasizes the gradient nature of the traditional dichotomy between syntax and compounding. The book will thus appeal not only to the linguists interested specifically in Italian word-formation, but also to a larger community of scholars who seek a more general view of the word-formation phenomena.

Japanese and Western Phenomenology - Philip Blosser 2012-12-06

This volume has been developed from the first extensive meeting of Japanese and Western phenomenologists, which was sponsored by the Center for Advanced Research in Phenomenology, Inc. and the Phenomenological Association of Japan and held in Sanda City. Chiefly philosophical and chiefly concerned with Husserl's thought, it also shows links with several human sciences and such figures as

Wilhelm Dilthey, Eugen Fink, Martin Heidegger, Max Scheler, Alfred Schutz, and well as with Zen and the Japanese tradition in phenomenology, which is second only to the German in age and has recently blossomed anew. Further such meetings have occurred and are planning, building upon this foundation.

Nerve and Vascular Injuries in Sports Medicine - Venu Akuthota 2009-05-28

The field of sports medicine covers a tremendous territory. Athletes present to their physician with everything from sprained ankles to bowel problems while running. Many of the classic textbooks in sports medicine cover many of these issues in a cursory way. Two major organ systems that account for many injuries in athletes are the nervous system and the vascular system. Because of their widespread, diffuse nature, athletes can present with myriad signs and symptoms related to these systems. Drs. Akuthota and Herring have done an outstanding job in their textbook *Nerve and Vascular Injuries in Sports Medicine* to produce a commonsense, yet thorough, approach to potential nerve and vascular injuries in athletes. The text provides any physician or clinician who evaluates and treats athletes with a clear path to an appropriate history, physical examination, imaging studies, and electrophysiologic and vascular examinations of any athlete with potential nerve or vascular injuries. The first third of the book describes the appropriate evaluation of athletes with nerve and vascular symptoms and signs. Emphasis is placed on kinetic chain contributions to nerve and vascular injuries to address not only the cause of the injury but possible associated, contributing biomechanical deficiencies. The last two-thirds of the book cover regional specific nerve and vascular injuries with special attention to stingers, thoracic outlet syndrome, lumbar radiculopathy, and compartment syndromes.

Literature and Historiography in the Spanish Golden Age - Sofie Kluge 2021-09-30

Golden Age departures in historiography and theory of history in some ways prepared the ground for modern historical methods and ideas about historical factuality. At the same time, they fed into the period's own "aesthetic-historical culture" which amalgamated fact and fiction in ways modern historians would consider counterfactual: a culture where imaginative historical prose, poetry and drama self-consciously rivalled the accounts of royal chroniclers and the dispatches of diplomatic envoys; a culture dominated by a notion of truth in which skilful construction of the argument and exemplarity took precedence over factual accuracy. *Literature and Historiography in the Spanish Golden Age: The Poetics of History* investigates this grey area backdrop of modern ideas about history, delving into a variety of Golden Age aesthetic-historical works which cannot be satisfactorily described as either works of literature or works of historiography but which belong in between these later strictly separate categories.

Studies in Greek Lexicography - Georgios K. Giannakis 2018-11-19

This volume presents nineteen studies by specialists in the field of Greek lexicography. A number of papers deal with historical aspects of Greek lexicography covering all phases of the language, i.e. ancient, medieval and modern, as well as the interrelations of Greek to neighboring languages. In addition, other papers address more formal issues, such as morphological, semantic and syntactic problems that are relevant to the study of Greek lexicography, as well as the study of individual words. Finally, in one study the problem of technical linguistic terminology is addressed along with the methodological, epistemological and other issues relating to the particular problem. The work is of special interest to scholars on the long standing problems of diachronic semantics, historical morphology and word formation, and to all those interested in etymology and the study of words of the Greek language.

Computational Processing of the Portuguese Language - Nuno J. Mamede 2003-06-18

The refereed proceedings of the 6th International Workshop on Computational Processing of the Portuguese Language, PROPOR 2003, held in Faro, Portugal, in June 2003. The 24 revised full papers and 17 revised short papers presented were carefully reviewed and selected from 64 submissions. The papers are organized in topical sections on speech analysis and recognition; speech synthesis; pragmatics, discourse, semantics, syntax, and the lexicon; tools, resources, and applications; dialogue systems; summarization and information extraction; and evaluation.

[Soft Tissue Balancing in Total Knee Arthroplasty](#) - Shuichi Matsuda 2017-05-02

In this booklet, experts from across the world, including members of the ISAKOS Knee Arthroplasty Committee, offer clear, up-to-date guidance on all aspects of soft tissue or ligament balancing in primary total knee arthroplasty with the aim of enabling the reader to achieve optimal patient outcomes. After an introduction explaining the normal soft tissue condition in the native knee, surgical procedures are described, including techniques for the management of severe deformity. The most striking feature of the booklet, however, is the many pages devoted to the accurate evaluation and clinical relevance of ligament balancing. Different techniques and devices for intraoperative soft tissue assessment are discussed, highlighting, for example, the use of gap-measuring devices or trial liners with load-bearing sensors to achieve more objective evaluation. Above all, special attention is devoted to the crucial issue of the impact of intraoperative soft tissue balance on postoperative results. In the closing chapter, very experienced surgeons introduce intraoperative troubleshooting in order to assist successful completion of arthroplasty.

OSCEs for Medical Finals - Hamed Khan 2013-01-22

OSCEs for Medical Finals has been written by doctors from a variety of specialties with extensive experience of medical education and of organising and examining OSCEs. The book and website package consists of the most common OSCE scenarios encountered in medical finals, together with checklists, similar to OSCE mark schemes, that cover all of the key learning points students need to succeed. Each topic checklist contains comprehensive exam-focussed advice on how to maximise performance together with a range of 'insider's tips' on OSCE strategy and common OSCE pitfalls. Designed to provide enough coverage for those students who want to gain as many marks as possible in their OSCEs, and not just a book which will ensure students 'scrape a pass', the book is fully supported by a companion website at www.wiley.com/go/khan/osces, containing: OSCE checklists from the book A survey of doctors and students of which OSCEs have a high chance of appearing in finals in each UK medical school

[Hippocratic Writings](#) - Hippocrates 2005-05-26

This work is a sampling of the Hippocratic Corpus, a collection of ancient Greek medical works. At the beginning, and interspersed throughout, there are discussions on the philosophy of being a physician. There is a large section about how to treat limb fractures, and the section called *The Nature of Man* describes the physiological theories of the time. The book ends with a discussion of embryology and a brief anatomical description of the heart.

Surgery of the Cranio-Vertebral Junction - Enrico Tessitore 2020-01-21

This book provides a unique tool for approaching cranio-vertebral junction (CVJ) surgery. Following a brief introduction to the relevant anatomy and biomechanics of CVJ, it explores the field of cranio-vertebral junction lesions and their management. Furthermore, individual chapters cover endovascular surgery, endoscopic skull base techniques, navigation and robotics, ensuring that surgeons stay up-to-date. A chapter addressing the consequences of CVJ surgery with regard to sagittal balance is of particular importance. The book is structured according both to the type of lesion involving the CVJ (tumor, trauma), and to the type of surgical approach (anterior, posterior). Further, it reflects innovative treatment modalities that have improved patient safety and efficacy rates for surgery involving the CVJ, and covers both open and minimally invasive surgical methods, enabling surgeons to hone their skills in both areas.

Flammable Australia - Ross Andrew Bradstock 2012

Leading researchers give an overview of the field of fire ecology in Australia.

Cognitive Neuroscience of Language - David Kemmerer 2014-11-20

Language is one of our most precious and uniquely human capacities, so it is not surprising that research on its neural substrates has been advancing quite rapidly in recent years. Until now, however, there has not

been a single introductory textbook that focuses specifically on this topic. *Cognitive Neuroscience of Language* fills that gap by providing an up-to-date, wide-ranging, and pedagogically practical survey of the most important developments in the field. It guides students through all of the major areas of investigation, beginning with fundamental aspects of brain structure and function, and then proceeding to cover aphasia syndromes, the perception and production of speech, the processing of language in written and signed modalities, the meanings of words, and the formulation and comprehension of complex expressions, including grammatically inflected words, complete sentences, and entire stories. Drawing heavily on prominent theoretical models, the core chapters illustrate how such frameworks are supported, and sometimes challenged, by experiments employing diverse brain mapping techniques. Although much of the content is inherently challenging and intended primarily for graduate or upper-level undergraduate students, it requires no previous knowledge of either neuroscience or linguistics, defining technical terms and explaining important principles from both disciplines along the way.
