Jersey Shore Impressionists - Roy Pedersen 2013

Water and light have seduced artists through the years and the quality of these elements at the New Jersey Shore continues to attract artists to this day. Between the late 1800s and 1940, an inspired group of painters were drawn to the New Jersey coastline, forming communities of artists. Jersey Shore Impressionists breaks new ground in the history of American art by recognizing the distinct influence of New Jersey and its Shore on impressionist era American painters. This book establishes - for the first time - a category of impressionist American painters who focused on, or were profoundly influenced by, the landscapes and seascapes of this Shore - from Sandy Hook and Highlands to the Barnegat Bay region to Cape May. "Not since 1964, nearly 50 years ago, and only once before that in 1938 has there been published a book on painters in New Jersey," says the book's author, Roy Pedersen. "Never until now has there appeared a survey of the regional impressionist painters of New Jersey. This book and the accompanying exhibition for the first time celebrate these unrecognized works into the history of New Jersey and American art." Jersey Shore Impressionists is produced in conjunction with a 2013 exhibition at the Morven Museum & Garden in Princeton, NJ. The exhibition, titled "Coastal Impressions: Painters of the Jersey Shore, 1880-1940" seeks to examine how the New Jersey shore was home to artist colonies whose output rivaled that of the better-known colonies of Old Lyme and Cos Cob, Connecticut, and Bucks County, Pennsylvania. In a Foreword, Richard J. Boyle, former director of the Pennsylvania Academy of the Fine Arts, describes the foundation of art colonies, and how they traveled from origins in mid-nineteenth century France to the plein-air attraction of the Jersey Shore's "special light." The first art colony - at Manasquan - forms around 1880 as young artists fresh from European training in Germany, France and Italy begin to arrive, and the book includes work from these artists - Will Hicok Low, Theodore Robinson, Albert Grantley Reinhart, Charles Freeman and Caroline Coventry Haynes. The next generation - Edward Boulton, Ida Wells Stroud, Julius Golz - trained in America, join and form new colonies to paint the unique light as well as the activities of the Shore. The passionate work created by these artists stands as an important, but unsung, chapter of American Impressionism and is celebrated in this book, establishing the important contribution to American art in general, and New Jersey's cultural heritage in particular.

Science and Applications of Coastal Remote Sensing - Kevin Ross Turpie 2021-06-01

IN MEMORIAL: This Research Topic is dedicated to our co-editor Dr. Tiffany Moisan, a well-regarded ocean color remote sensing scientist, who unexpectedly passed away during its preparation. Dr. Moisan was a dear friend, and upbeat and enthusiastic colleague and a scientist committed to the use of remote sensing to improve our understanding of marine microbiology and phytoplankton ecology. She was a strong supporter of the development of remote sensing capabilities and applications for coastal and inland waters, and we know that she would have wanted this Research Topic to provide her colleagues an opportunity to share and promote their work in this area. A voice in our community is now quiet. Let the chorus of our shared song continue with her memory. Dr. Tiffany Moisan is survived by her loving family, including her husband, Dr. John Moisan and her two daughters.

Soviet Scientists and the State - Peter Kneen 1984-01-01

Soviet Scientists and the State examines the constraints place upon the natural scientist in the Soviet Union. The book brings into sharp relief the social and economic consequences arising from the highly centralized character of Communist Party rule. Because conditions regarded as essential for effective scientific research conflict with the form of political control prevailing in the Soviet Union, the Soviet scientists' working environment provides a fruitful context for assessing the methods adopted by the Communist Party. This study is an excellent base from which to explore some important sources of change in contemporary Soviet politics. The book is also a survey of the present state of natural science in the U.S.S.R. Topics of concern range from the scientists' background and social characteristics, institutions, status, and leadership to their social relations and effectiveness. The relationship of the Communist Party to the scientists is examined in detail.

Every Man a King and Share Our Wealth - Huey P Long 2020-12-09
"Every man a king, so there would be no such thing as a man or woman who did not have the necessities of life, who would not be dependent

upon the whims of the financial barons for a living." -Share Our Wealth, Huey Long (1934) Every Man a King and Share Our Wealth-Two Huey Long Speeches by extraordinary Louisiana left-wing populist Huey Long includes: - his 1934 radio address announcing the start of his "Share Our Wealth" Movement, promoting greater equality among Americans. By 1935 this movement had 27,000 chapters with 7.5 million members. - Long's Statement on the Share Our Wealth Society in Congress (1935) with proposals, such as that "every family was to be furnished with a homestead allowance of not less than one-third the average family wealth of the country" and "yearly income cannot exceed more than 300 times the size of the average family income." Long's radical agenda as expressed in Every Man a King and Share Our Wealth still offers food for thought for the social-economic debates of the 21st century.

Early Chinese Work in Natural Science - Joseph C.Y. Chen 1996-03-01

This book re-examines the nature of early Chinese work in natural science, on the basis of original records analysis and artifacts discovered in recent decades by archaeological explorations of China's past. It presents a concise account of early scientific ideas and thoughts of nature, and their effect on the development of natural science. It is suggested that the traditional characterization of early Chinese work in natural science requires substantial modification. The absence of early Chinese participation in the development of 'modern' science is not, as commonly assumed, a consequence of lacking early scientific tradition in ancient China. It is argued that the concept of 'inhibitive' factors is dubious without taking their dynamical relationships into account, and

that socio-economical and political influence has to be considered when seeking answers to the major setbacks in science and technology in China. The book also shows that there is no basis for the claims saying that acoustics and astronomy in China have their roots in Babylon.

Why Lawsuits are Good for America - Carl T. Bogus 2003-07-01

Judging by the frequency with which it makes an appearance in television news shows and late night stand up routines, the frivolous lawsuit has become part and parcel of our national culture. A woman sues McDonald's because she was scalded when she spilled her coffee. Thousands file lawsuits claiming they were injured by Agent Orange, silicone breast implants, or Bendectin although scientists report these substances do not cause the diseases in question. The United States, conventional wisdom has it, is a hyperlitigious society, propelled by avaricious lawyers, harebrained judges, and runaway juries. Lawsuits waste money and time and, moreover, many are simply groundless. Carl T. Bogus is not so sure. In *Why Lawsuits Are Good for America*, Bogus argues that common law works far better than commonly understood. Indeed, Bogus contends that while the system can and occasionally does produce "wrong" results, it is very difficult for it to make flatly irrational decisions. Blending history, theory, empirical data, and colorful case studies, Bogus explains why the common law, rather than being outdated, may be more necessary than ever. As Bogus sees it, the common law is an essential adjunct to governmental regulation—essential, in part, because it is not as easily manipulated by big business. Meanwhile, big business has launched an all out war on the common law. "Tort reform"—measures designed to make more difficult for individuals to sue corporations—one of the ten proposals in the Republican Contract With America, and George W. Bush's first major initiative as Governor of Texas. And much of what we have come to believe about the system comes from a coordinated propaganda effort by big business and its allies. Bogus makes a compelling case for the necessity of safeguarding the system from current assaults. *Why Lawsuits Are Good for America* provides broad historical overviews of the development of American common law, torts, products liability, as well as fresh and provocative arguments about the role of the system of "disciplined democracy" in the twenty-first century.

Success for All - Yanyu Zhou 2008

This book provides a detailed account of an educational experiment in a middle school in Shanghai, China. The school, called Zhabei No. 8 Middle School (hereafter No. 8 School), is located in a run-down, lower working class district. Since the mid-1980s the school has experimented on an educational reform program called success education, aiming to help those at-risk students to be successful in school. This book illustrates how this educational experiment has been carried out and identified experiences that could be learned by the international educational community. The book analyzes the critical role played by Principal Liu

Jinghai, and particular attention is paid to the strategies adopted by the school to help enhance students' self-esteem through integrating love and care throughout the school's curriculum and activities. The pivotal roles played by teachers called "class directors" are meticulously studied, and efforts the school has made to collaborate with parents and the local community are examined. An ethnographic approach was used to gather data in this study. A combination of interviews, participant-observation, and document analysis was applied to arrive at a systematic and complex understanding of this educational endeavor in China.

Educating the Student Body - Committee on Physical Activity and Physical Education in the School Environment 2013-11-13

Physical inactivity is a key determinant of health across the lifespan. A lack of activity increases the risk of heart disease, colon and breast cancer, diabetes mellitus, hypertension, osteoporosis, anxiety and depression and others diseases. Emerging literature has suggested that in terms of mortality, the global population health burden of physical inactivity approaches that of cigarette smoking. The prevalence and substantial disease risk associated with physical inactivity has been described as a pandemic. The prevalence, health impact, and evidence of changeability all have resulted in calls for action to increase physical activity across the lifespan. In response to the need to find ways to make physical activity a health priority for youth, the Institute of Medicine's Committee on Physical Activity and Physical Education in the School Environment was formed. Its purpose was to review the current status of physical activity and physical education in the school environment, including before, during, and after school, and examine the influences of physical activity and physical education on the short and long term physical, cognitive and brain, and psychosocial health and development of children and adolescents. *Educating the Student Body* makes recommendations about approaches for strengthening and improving programs and policies for physical activity and physical education in the school environment. This report lays out a set of guiding principles to guide its work on these tasks. These included: recognizing the benefits of instilling life-long physical activity habits in children; the value of using systems thinking in improving physical activity and physical education in the school environment; the recognition of current disparities in opportunities and the need to achieve equity in physical activity and physical education; the importance of considering all types of school environments; the need to take into consideration the diversity of students as recommendations are developed. This report will be of interest to local and national policymakers, school officials, teachers, and the education community, researchers, professional organizations, and parents interested in physical activity, physical education, and health for school-aged children and adolescents.
