**Dimensions of Personality** - Martin Rein 2018-02-06

This is the original work on which Hans Eysenck's fifty years of research have been built. It introduced many new ideas about the nature and measurement of personality into the field, related personality to abnormal psychology, and demonstrated the possibility of testing personality theory experimentally. The book is the result of a concentrated and cooperative effort to discover the main dimensions of personality,

and to define them operationally, that is, by means of strictly experimental, quantitative procedures. More than three dozen separate researches were carried out on some 10,000 normal and neurotic subjects by a research team of psychologists and psychiatrists. A special feature of this work is the close collaboration between psychologists and psychiatrists. Eysenck believes that the exploration of personality would have reached an advanced state much earlier had such a collaboration been the rule rather than the exception in studies of this kind. Both disciplines benefit by working together on the many problems they have in common. In his new introduction, Eysenck discusses the difficulty he had in conveying this belief to scientists from opposite ends of the psychology spectrum when he first began work on this book. He goes on to explain the basis from which Dimensions of Personality developed. Central to any concept of personality, he states, must be hierarchies of traits organized into a dimensional system. The two major dimensions he posited, neuroticism and extraversion, were in disfavor with most scientists of personality at the time. Now they form part of practically all descriptions of personality. Dimensions of Personality is a landmark study and should be read by both students and professionals in the fields of psychiatry, psychology, and sociology.

This book provides a comprehensive examination of both diagnostic and [psychotherapeutic and other] treatment issues of personality disorders, includes practical guidance for using standardized instruments to assess personality, and underscores the utility of the FFM's dimensional approach for understanding personality and personality disorders.

**The Revised NEO Personality Inventory** - Ralph L. Piedmont 2013-11-11

The assessment of individual differences has a long history. As early as 2200 B.C. the Chinese were employing methods to select candidates for civil service positions. Over the ensuing centuries philosophers, theologians, and the nobility all noticed and debated the role of "character" in shaping the destiny and quality of individual lives. This interest spawned widely different methods of evaluating the timbre of temperament-bumps on the head, lines on the hand, shape of the body-all of which were employed in attempts to gain insight into basic human motives. The emergence of the scientific method and its application to this endeavor reinvigorated society's efforts in this direction, and an abundant variety of assessment instruments consequently became available. The outbreak of World War I created a need for the efficient assessment of individual differences in large groups. Such instruments as the Woodworth Personal Data Sheet and the Army Alpha Test resulted in genuine breakthroughs in assessment technology. These tests provided standardized sets of items that permitted quantitative comparisons among people. Over the years, numerous scales have been developed which have been based on widely differing levels of psychometric sophistication.

**Education for Life and Work** - National Research Council 2013-01-18

Americans have long recognized that investments in public education contribute to the common good, enhancing national prosperity and supporting stable families, neighborhoods, and communities. Education is even more critical today, in the face of economic, environmental, and social challenges. Today's children can meet future challenges if their schooling and informal learning activities prepare them for adult roles as citizens, employees, managers, parents, volunteers, and entrepreneurs. To achieve their full potential as adults, young people need to develop a range of skills and knowledge that facilitate mastery and application of English, mathematics, and other school subjects. At the same time, business and political leaders are increasingly asking schools to develop skills such as problem solving, critical thinking, communication, collaboration, and self-management - often referred to as "21st century skills." *Education for Life and Work: Developing Transferable Knowledge and Skills in the 21st Century* describes this important set of key skills that increase deeper learning, college and career readiness, student-centered learning, and higher order thinking. These labels include both cognitive and non-cognitive skills- such as critical thinking, problem solving, collaboration, effective communication, motivation, persistence, and learning to learn. 21st century skills also include creativity, innovation, and ethics that are important to later success and may be developed in formal or informal learning environments. This report also describes how these skills relate to each other and to more traditional academic skills and content in the key disciplines of reading, mathematics, and science. *Education for Life and Work: Developing Transferable Knowledge and Skills in the 21st Century* summarizes the findings of the research that investigates the importance of such skills to success in education, work, and other areas of adult responsibility and that demonstrates the importance of developing these skills in K-16 education. In this report, features related to learning these skills are identified, which include teacher professional development, curriculum, assessment, after-school and out-of-school programs, and informal learning centers such as exhibits and museums.

**Psychological Criminology** - Richard Wortley 2011-04-12

Psychological Criminology addresses the question: what is it about individuals and their experiences that cause them to commit crime and/or to become criminal? This book provides a comprehensive coverage of psychological theories of crime and criminality, exploring theories focusing on factors present at birth (human nature, heredity); theories that focus on factors that influence the offender over the lifespan (learning, development); and theories focusing on factors present at the crime scene. It emphasizes the connections among the different approaches, and demonstrates how, taken together rather than as rival explanations, they provide a more complete picture of crime and criminality than each provides individually. Theories are arranged throughout the book in a temporal sequence, from distal to proximal causes of crime. The analysis spans 100,000 years, from the evolutionary roots of criminal behaviour in the ancestral environments of early humans on the African savana, to the decision to engage in a specific criminal act. Key features of the book include: a focus on theory - 'explaining' crime and criminality, an integrative approach, accessible to readers who do not have a background in psychology. Psychological Criminology highlights the contributions that psychological theory can make to the broader field of criminology; it will be of interest to students, academics, researchers and practitioners in both criminology and forensic psychology.

*Psychology for Sustainability* - Britain A. Scott 2015-07-24

*Psychology for Sustainability*, 4th Edition -- known as *Psychology of Environmental Problems: Psychology for Sustainability* in its previous edition -- applies psychological theory and research to so-called "environmental" problems, which actually result from human behavior that degrades natural systems. This upbeat, user-friendly edition represents a dramatic reorganization and includes a substantial amount of new content that will be useful to students and faculty in a variety of disciplines—and to people outside of academia, as well. The literature reviewed throughout the text is up-to-date, and reflects the burgeoning efforts of many in the behavioral sciences who are working to create a more sustainable society. The 4th Edition is organized in four sections. The first section provides a foundation by familiarizing readers with the current ecological crisis and its historical origins, and by offering a vision for a sustainable future. The next five chapters present psychological research methods, theory, and findings pertinent to understanding, and changing, unsustainable behavior. The third section addresses the reciprocal relationship between planetary and human wellbeing and the final chapter encourages readers to take what they have learned and apply it to move behavior in a sustainable direction. The book concludes with a variety of theoretically and empirically grounded ideas for how to face this challenging task with positivity, wisdom, and enthusiasm. This textbook may be used as a primary or secondary textbook in a wide range of courses on Ecological Psychology, Environmental Science, Sustainability Sciences, Environmental Education, and Social Marketing. It also provides a valuable resource for professional audiences of policymakers, legislators, and those working on sustainable communities.

**The Cross-Cultural Coaching Kaleidoscope** - Jennifer Plaister-Ten 2018-04-27

Coaching has emerged from a Western, largely Anglo-American, perspective that may not be appropriate across cultures, given the multi-cultural nature of societies and workplaces today and the working practice of virtual teams. This has repercussions for the coaching profession. There is little knowledge about the constituent factors of cross-cultural coaching; or the attitudes, skills and knowledge required to practice in a global market. Therefore, there is little sharing of best practice that in turn has an impact upon coaching

competency. This book shows a unique approach to describing the impact of culture in the coaching relationship. It demonstrates how culture can affect our perceptions, thoughts and emotions, influence our choices and impact our behaviour. It identifies the need for the coach to become adept at raising awareness of cultural influences and to reframe psychological constructs often thought to have universal meaning; such as responsibility.

*Personality Traits and Drug Consumption* - Elaine Fehrman 2019-04-26

This book discusses the psychological traits associated with drug consumption through the statistical analysis of a new database with information on 1885 respondents and use of 18 drugs. After reviewing published works on the psychological profiles of drug users and describing the data mining and machine learning methods used, it demonstrates that the personality traits (five factor model, impulsivity, and sensation seeking) together with simple demographic data make it possible to predict the risk of consumption of individual drugs with a sensitivity and specificity above 70% for most drugs. It also analyzes the correlations of use of different substances and describes the groups of drugs with correlated use, identifying significant differences in personality profiles for users of different drugs. The book is intended for advanced undergraduates and first-year PhD students, as well as researchers and practitioners. Although no previous knowledge of machine learning, advanced data mining concepts or modern psychology of personality is assumed, familiarity with basic statistics and some experience in the use of probabilities would be helpful. For a more detailed introduction to statistical methods, the book provides recommendations for undergraduate textbooks.

**Multimodal Metaphor and Metonymy in Advertising** - Paula Pérez Sobrino 2017-12-15

Metaphor and metonymy appeal to us because they evoke mental images in unique but still recognisable ways. The potential for figurative thought exists in everyone, and it pervades our everyday social interactions. In particular, advertising offers countless opportunities to explore the way in which people think creatively through metaphor and metonymy. The thorough analysis of a corpus of 210 authentic printed advertisements shows the central role of multimodal metaphor, metonymy, and their patterns of interaction, at the heart of advertising campaigns. This book is the first in-depth research monograph to bring together qualitative and quantitative evidence of metaphor-metonymy combinations in real multimodal discourse. It combines detailed case study analyses with corpus-based analysis and psycholinguistic enquiry to provide the reader with a prismatic approach to the topic of figurative language in multimodal advertising. Besides its theoretical contribution to the field of multimodal figurative language, this monograph has a wide number of practical applications due to its focus on advertising and the communicative impact of creative messages on consumers. This book will pave the way for further qualitative and quantitative research on the ways in which figurative language shapes multimodal discourse, and how it relates to our everyday creative thinking.
