The Military Balance 2020 - The International The International Institute for Strategic Studies (IISS) 2020-02-14
The Military Balance is an authoritative assessment of the military capabilities and defence economics of 171 countries. Detailed A-Z entries list each country's military organisation, personnel numbers, equipment inventories, and relevant economic and demographic data. Regional and select country analyses cover the major developments affecting defence policy and procurement, and defence economics. The opening graphics section displays notable defence statistics, while additional data sets detail selected arms orders and military exercises, as well as comparative defence expenditure and personnel numbers. The Military Balance is an indispensable handbook for anyone conducting serious analysis of security policy and military affairs. The International Institute for Strategic Studies, founded in 1958, is an independent centre for research, analysis and debate on the problems of conflict, however caused, that have, or potentially have, an important military dimension. 'Amid continuing conflict and broadening insecurity, The Military Balance provides essential facts and analysis for decision-makers and for better informed public debate.' - Dr Robert M. Gates, former U.S. Secretary of Defense 'Because military affairs are inevitably clouded in fog, the IISS Military Balance is an essential companion for those who seek to understand.' - Lord Robertson of Port Ellen, former Secretary-General of NATO 'The Military Balance is widely recognised as the best unclassified source of defense information on personnel, equipment and budgets for every country.' - Leon Panetta, former U.S. Secretary of Defense

New Trends in Software Methodologies, Tools and Techniques - Hamido Fujita 2008
"New Trends in Software Methodologies, Tools and Techniques, as part of the SoMeT series, contributes to new trends and theories in the direction in which the editors believe software science and engineering may develop in order to transform the role of software and science integration in tomorrow s global information society. This book is an attempt to capture the essence of a new state-of-the-art in software science and its supporting technology. Aiming at identifying the challenges such a technology has to master. It contains extensively reviewed papers given at the Seventh International Conference on New Trends in Software Methodology Tools, and Techniques (SoMeT_08) held in Sharjah, United Arab Emirates. One of the important issues addressed in this book is handling cognitive issues on software development to adapt to user mental state. Tools and techniques have been contributed here. Another aspect challenged in this conference was intelligent software design in software security. This book, and the series, will also contribute to the elaboration on such new trends and related academic research studies and development." --Book Jacket.

Arming without Aiming - Stephen P. Cohen 2013-01-14
India has long been motivated to modernize its military, and it now has the resources. But so far, the drive to rebuild has lacked a critical component—strategic military planning. India's approach of arming without strategic purpose remains viable, however, as it seeks great-power accommodation of its rise and does not want to appear threatening. What should we anticipate from this effort in the future, and what are the likely ramifications? Stephen Cohen and Sunil Dasgupta answer those crucial questions in a book so timely that it reached number two on the nonfiction bestseller list in India. "Two years after the publication of Arming without Aiming, our view is that India's strategic restraint and its consequent institutional arrangement remain in place. We do not want to predict that India's military-strategic restraint will last forever, but we do expect that the deeper problems in Indian defense policy will continue to slow down military modernization."—from the preface to the paperback edition

Perceptions Are Reality - Mark D Vertuli Editor 2018-10-12
Volume 7, Perceptions Are Reality: Historical Case Studies of Information Operations in Large-Scale Combat Operations, is a collection of ten historical case studies from World War II through the recent conflicts in Afghanistan and Ukraine. The eleventh and final chapter looks forward and explores the implications of the future information environment across the range of military operations during both competition and conflict. The case studies illustrate how militaries and subnational elements use information to gain a position of relative advantage during large-scale combat. The intent of this volume is to employ history to stimulate discussion and analysis of the implications of information operations in future LSCO by exploring past actions, recognizing and understanding successes and failures, and offering some lessons learned from each author's perspective.

Scars, Marks & Tattoos - Jacqueline Caruso 2021-03-31
I have physical scars from past surgeries, however, I have emotional scars as well. They were buried deep inside (hidden). It wasn't until my mother died was I able to "catch my breath" and to make sense of or process the emotional pain I had endured due to her prescription drug addiction, resulting in my own addictions.

2016 National Survey of Fishing, Hunting and Wildlife-Associated Recreation - Fish and Wildlife Service (U S 2018-05-24
This report provides a detailed snapshot of our nation's passion for wildlife and nature. It serves as a road map to guide efforts to reach more Americans to provide them with opportunities to hunt, fish, and enjoy

America's wildlife and wild places. Bird/wildlife watching, hunting, fishing are not just favorite pastimes, but they share revenues from sale of licenses and tags, as well as excise taxes paid by hunters, anglers, and shooters to continue to support vital wildlife and habitat conservation efforts in every state. The report outlines the details for compilation of information and surveys to different populations and provides highlights along with statistical information represented in tables from the data collected. Native North American Armor, Shields, and Fortifications - David E. Jones 2010-01-01
The first systematic comparative study of the defensive armor and fortifications of aboriginal Native Americans. From the Chickasaw fighting the Choctaw in the Southeast to the Sioux battling the Cheyenne on the Great Plains, warfare was endemic among the North American Indians when Europeans first arrived on this continent. An impressive array of offensive weaponry and battle tactics gave rise to an equally impressive range of defensive technology. Native Americans constructed very effective armor and shields using wood, bone, and leather. Their fortifications ranged from simple refuges to walled and moated stockades to multiple stockades linked in strategic defensive networks. In this book, David E. Jones offers the first systematic comparative study of the defensive armor and fortifications of aboriginal Native Americans. Drawing data from ethnohistorical accounts and archaeological evidence, he surveys the use of armor, shields, and fortifications both before European contact and during the historic period by American

Indians from the Southeast to the Northwest Coast, from the Northeast Woodlands to the desert Southwest, and from the Sub-Arctic to the Great Plains. Jones also demonstrates the sociocultural factors that affected warfare and shaped the development of different types of armor and fortifications. Extensive eyewitness descriptions of warfare, armor, and fortifications, as well as photos and sketches of Indian armor from museum collections, add a visual dimension to the text. "This succinct book is well written and systematically organized and it will serve as the starting point for any future studies on the subject." —Military History of the West "This book provides the first and only comprehensive survey of armor, shields, and fortifications [of American Indians]. . . . It has left me with a new appreciation for the sheer diversity of warfare, armor, and fortifications used by Native Americans, and it shatters stereotypes about the nature of aboriginal warfare." —Wayne Van Horne, associate professor of Anthropology, Kennesaw State University

More Java Gems - Dwight Deugo 2000-01-28
This book presents the best articles and columns published in Java Report between 1997 and 1999. Each article is independent of any specific version of Java and relies mainly on those classes that are now part of the standard Java class library and APIs. Also, each article and column discusses Java topics and implementations that are not readily available in a single book. The book serves as an excellent reference to anyone involved with Java. The reader can learn more about the language, perform analysis, design and modeling, work on specific implementations, check performance, and perform testing. This book presents the good ideas of people who have used Java for "Real" applications.

Under an Ionized Sky - Elana Freeland 2018-02-13
It is difficult to believe that our planet has been weaponized before our very eyes, but that is exactly what has happened. First, we were seduced by the convenience of a wireless world; then, atmospheric weather experimentation in the guise of carbons "climate change" converted the air we breathe into an antenna. Now, the geo-engineering we've been subjected to for two decades is being normalized as the "Star Wars" Space Fence rises around and within us. Is this the Space Age we were promised?

Autonomous Vehicles in Support of Naval Operations - National Research Council 2005-08-05
Autonomous vehicles (AVs) have been used in military operations for more than 60 years, with torpedoes, cruise missiles, satellites, and target drones being early examples.1 They have also been widely used in the civilian sector--for example, in the disposal of explosives, for work and measurement in radioactive environments, by various offshore industries for both creating and maintaining undersea facilities, for atmospheric and undersea research, and by industry in automated and robotic manufacturing. Recent military experiences with AVs have consistently demonstrated their value in a wide range of missions, and anticipated developments of AVs hold promise for increasingly significant roles in future naval operations. Advances in AV capabilities are enabled (and limited) by progress in the technologies of computing and robotics, navigation, communications and networking, power sources and propulsion, and materials. Autonomous Vehicles in Support of Naval Operations is a forward-looking discussion of the naval

operational environment and vision for the Navy and Marine Corps and of naval mission needs and potential applications and limitations of AVs. This report considers the potential of AVs for naval operations, operational needs and technology issues, and opportunities for improved operations.

Weapon of Choice - Charles H. Briscoe 2010-01
First published in 2003, this is the first unclassified official history authored by the U.S. Army Special Operations Command relating to Operation Enduring Freedom. Contains extensive maps and illustrations. Previously difficult to obtain, this extensive study shows what Army Special Operations Forces (ARSOF) accomplished to drive the Taliban from power and to destroy al-Quaeda and Taliban strongholds as part of the global war on terrorism during Operation Enduring Freedom.

21st Century Prometheus - Maurizio Martellini 2020-03-11
This book describes the evolving CBRN risk landscape and highlights advances in the "core" CBRN technologies, including when combined with (improvised) explosive devices (CBRNe threats). It analyses how associated technologies create new safety and security risks, challenging certain assumptions that underlie current control regimes. The book also shows how technologies can be enablers for more effective strategies to mitigate these risks. 21st-century safety and security risks emanating from chemical, biological, radiological and nuclear materials – whether resulting from natural events, accidents or malevolent use - are increasingly shaped by technologies that enable their development, production or use in ways that differ from the past. Artificial intelligence, the use of cyberspace, the revolution in the life sciences, new manufacturing methods, new platforms and equipment for agent delivery, hypersonic weapons systems, information tools utilised in hybrid warfare – these and other technologies are reshaping the global security environment and CBRN landscape. They are leading to a growing potential for highly targeted violence, and they can lead to greater instability and vulnerability worldwide. At the same time, technology offers solutions to manage CBRN risks. Examples are faster detection, more accurate characterisation of the nature and origin of CBRN agents, new forensic investigation methods, or new medical treatments for victims of CBRN incidents. New educational concepts help to foster a culture of responsibility in science and technology and strengthen governance. New training methods help develop practical skills to manage CBRN risks more effectively. The book concludes that there is a growing need for a holistic framework towards CBRN risk mitigation. Traditional arms control mechanisms such as global, regional or bilateral treaties and export controls are still needed, as they provide a necessary legal and institutional framework. But laws and technology denial alone will not suffice, and institutional mechanisms can at times be weak. Given the pace of technological progress and the diffusion of critical knowledge, tools and materials, policymakers must accept that CBRN risks cannot be eliminated altogether. Instead, society has to learn to manage these risks and develop resilience against them. This requires a "softer", broadly based multi-stakeholder approach involving governments, industry, the research and development communities, educators, and civil society. Furthermore, educating policymakers that cutting-edge technologies may seriously affect global strategic stability could create incentives for developing a more creative and contemporary arms control strategy that fosters cooperation rather than incremental polarisation.

The Offshore Pipeline Construction Industry - Mark J. Kaiser 2020-04-08
The Offshore Pipeline Construction Industry: Activity Modeling and Cost Estimation in the United States Gulf of Mexico presents the latest technical concepts and economic calculations, helping engineers make better business decisions. The book covers flow assurance, development strategies on pipeline requirements and the construction service side with a global perspective. In addition, it focuses on one of the most underdeveloped, promising assets – the Gulf of Mexico. Pipeline construction and decommissioning estimation methods are examined with reliable data presented. A final section covers trends for oil, gas, bulk oil, bulk gas, service and umbilical pipelines for installation and decommissioning using correlation models. This book delivers a much-needed tool for the pipeline engineer to better understand the economical choices and alternatives to designing, constructing, and operating today's offshore pipelines. Built with construction and decommissioning decision tools supported by reliable data and case studies Organized by parts, including a section devoted to Gulf of Mexico statistics and estimation methods Helps readers gain practical knowledge on strategies and cost models from a global pipeline perspective, including environmental and mitigation considerations

Targeting: The Challenges of Modern Warfare - Paul A.L. Ducheine 2015-11-11
This book offers a multidisciplinary treatment of targeting. It is intended for use by the military, government legal advisers and academics. The book is suitable for use in both military training and educational programs and in Bachelor and Master degree level courses on such topics as War Studies and Strategic Studies. The book first explores the context of targeting, its evolution and the current targeting process and characteristics. An overview of the legal and ethical constraints on targeting as an operational process follows. It concludes by surveying contemporary issues in targeting such as the potential advent of autonomous weapon systems, 'non-kinetic' targeting, targeting in multinational military operations and leadership decapitation in counter-terrorism operations. The deep practical experience and academic background of the contributors ensures comprehensive treatment of current targeting and use of force issues. Paul Ducheine is Professor for Cyber Operations and Cyber Security, Netherlands Defence Academy, Breda, The Netherlands; and Professor of Law of Military Cyber Operations and Cyber Security at the University of Amsterdam, The Netherlands. Michael Schmitt is Charles H. Stockton Professor & Director, Stockton Center for the Study of International Law, U.S. Naval War College, Newport, Rhode Island, and Professor of Public International Law, University of Exeter, UK. Frans Osinga is Chair of the War Studies Department, Netherlands Defence Academy, Breda, The Netherlands, and Professor of Military Operational Art and Sciences.

Buyology - Martin Lindstrom 2010-02-02
NEW YORK TIMES BESTSELLER • "A fascinating look at how consumers perceive logos, ads, commercials, brands, and products."—Time How much do we know about why we buy? What truly influences our decisions in today's message-cluttered world? In Buyology, Martin Lindstrom presents the astonishing findings from his groundbreaking three-year, seven-million-dollar neuromarketing study—a cutting-edge experiment that peered inside the brains of 2,000 volunteers from all around the world as they encountered various ads, logos, commercials, brands, and products. His startling results shatter much of what we have long believed about what captures our interest—and drives us to buy. Among the questions he explores: • Does sex actually sell? • Does subliminal advertising still surround us? • Can "cool" brands trigger our mating instincts? • Can our other senses—smell, touch, and sound—be aroused when we see a product? Buyology is a fascinating and shocking journey into the mind of today's consumer that will captivate anyone who's been seduced—or turned off—by marketers' relentless attempts to win our loyalty, our money, and our minds.
