### **Health Professionals for a New Century - 2011**

One hundred years ago a series of seminal documents, starting with the Flexner Report of 1910, sparked an enormous burst of energy to harness the power of science to transform higher education in health.

Professional education, however, has not been able to keep pace with the challenges of the 21st century. A new generation of reforms is needed to meet the demands of health systems in an interdependent world. The report of the Commission on the Education of Health Professionals for the 21st Century, a global independent initiative consisting of 20 leaders from diverse disciplinary backgrounds and institutional affiliations, articulates a fresh vision and recommends renewed actions. Building on a rich legacy of educational reforms during the past century, the Commission's findings and recommendations adopt a global and multi-professional perspective using a systems approach to analyze education and health, with a focus on institutional and instructional reforms.

### *The Future of Nursing* - Institute of Medicine 2011-02-08

The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

#### **The Essentials of Clinical Reasoning for Nurses: Using the**

#### **Outcome-Present State Test Model for Reflective Practice -**

RuthAnne Kuiper 2017-05-24

In today's healthcare environment of scarce resources and challenges related to safety and quality, nurses must make decision after decision to ensure timely, accurate, and efficient provision of care. Solid decision-making, or lack thereof, can significantly affect patient care and outcomes. Clinical reasoning - how a nurse processes information and chooses what action to take - is a skill vital to nursing practice and split-second decisions. And yet, developing the clinical reasoning to make good decisions takes time, education, experience, patience, and reflection. Along the way, nurses can benefit from a successful, practical model that demystifies and advances clinical reasoning skills. In *The Essentials of Clinical Reasoning for Nurses*, authors RuthAnne Kuiper, Sandra O'Donnell, Daniel Pesut, and Stephanie Turrise provide a model that supports learning and teaching clinical reasoning, development of reflective and complex thinking, clinical supervision, and care planning through scenarios, diagnostic cues, case webs, and more.

#### *The Nln Jeffries Simulation Theory* - Pamela R. Jeffries 2015-09-09

Developed through theoretical thinking and tested by nurse education researchers, the NLN Jeffries Simulation Theory helps to articulate phenomena that exist within clinical simulation. By establishing and communicating known relationships within these phenomena, this theory provides a strong foundation for research and education, and enables future discovery of best practices in simulation. It will be kept by nursing students long after they graduate as a guide to resources that will be valuable throughout

their nursing careers. As a home care nurse working mainly with the geriatric community, I found the resources helpful in my practice. As an instructor, I found the book to be a very useful guide for teaching geriatrics.” Score: 90, 4 Stars —Doody’s Medical Reviews “[This] is a unique volume that effectively addresses the lack of gerontology case studies for use with undergraduate nursing students. Case studies are a pedagogically powerful approach to active learning that offer opportunities to apply content to clinical practice.” —The Gerontologist “The case narrative approach of this book promotes active learning that is more meaningful to students (and practicing nurses) and more likely to increase the transfer of evidence into practice. An excellent resource for faculty (staff educators) to facilitate critical learning skills.” —Liz Capezuti, PhD, RN, FAAN Dr. John W. Rowe Professor in Successful Aging Co-Director, Hartford Institute for Geriatric Nursing New York University College of Nursing Vivid case examples help guide nurses in developing appropriate interventions that include complementary and alternative health therapies and provide a basis for evaluating outcomes. Exercises interspersed throughout each case study include numerous open-ended and multiple-choice questions to facilitate learning and critical thinking. The text is unique in that some of the presented cases focus on psychosocial issues such as gambling addiction, hoarding behavior, emergency preparedness, and long-distance caregiving. Cases also depict geriatric clients who are living healthy, productive lives to counter myths and negative attitudes about older adults. Scenarios demonstrating ethical dilemmas prepare students to appropriately respond to “gray area” situations. The text is geared for AACN and NLN accreditation and is organized according to the needs of actual clinical settings. With cases that take place in the home and community or within primary, acute, and long-term care facilities, this book will be useful for courses specific to gerontology nursing or across any nursing curriculum. New to the Second Edition: A completely new section of Aging Issues Affecting the Family New cases addressing health care disparities, aging in place, and prevention of catheter-associated urinary tract infection Additional contemporary case studies The addition of

Quality for Safety in Nursing Education (QSEN) initiatives A greater focus on prioritization and delegation of client’s needs infused throughout exercises

*Clinical Simulations for the Advanced Practice Nurse* - Celeste M. Alfes  
2020-03-10

Provides high-quality, comprehensive simulation scenarios for APRNs This invaluable resource is the first simulation guide designed specifically to support the training and evaluation of advanced practice nursing students, novice nurse practitioners, and advanced practice nurses transitioning to new fields. This book provides a method and foundation to transform graduate nursing education to competency-based clinical evaluation, empowering programs with standardized templates and interprofessional education options for each scenario to advance graduate simulation education and research. This comprehensive guide delivers more than 50 comprehensive simulation scenarios, written by experienced APRNs, faculty, and simulation specialists. Scenarios are arranged by APRN specialty with applications for students, faculty, standardized patients, staff development, and simulation staff who prepare the advanced practice nurse and their interprofessional team for clinical practice. Not only is this text easy for faculty to use and implement, it also includes several levels of application and offers strategies for adapting scenarios to an interprofessional setting. Each simulation is structured into a consistent template for ease of use, which includes a description, objectives, equipment needed, pre-briefing, debriefing, and interprofessional considerations. Additionally, each scenario includes a one-page download designed for the Simulation Team focusing on "what happens" in a particular scenario. These comprehensive simulations encompass a wide variety of physical health and mental health scenarios across the lifespan as well as telehealth, critical care transport, and retail scenarios. Three detailed sections dedicated to APRN students, faculty, and simulation staff provide timely topics and sound advice from recent graduates, faculty experts, and leaders in the simulation field. The section for students provides anticipatory guidance for novice practitioners on how best to prepare for

formative and summative evaluations, standardized patient patient interactions, high-stakes simulation testing, and interprofessional experiences. The section for faculty provides practical information on how to design engaging simulation experiences for the APRN, and suggestions on mapping the various modes of simulation experiences to various levels and competencies.
