Exploring Geometry - Michael Hvidsten 2016-12-08

Exploring Geometry, Second Edition promotes student engagement with the beautiful ideas of geometry. Every major concept is introduced in its historical context and connects the idea with real-life. A system of experimentation followed by rigorous explanation and proof is central. Exploratory projects play an integral role in this text. Students develop a better sense of how to prove a result and visualize connections between statements, making these connections real. Geometry - Harold R. Jacobs 2003-03-14
Harold Jacobs's Geometry created a revolution in the approach to teaching this subject, one that gave rise to many ideas now seen in the NCTM Standards. Since its publication nearly one million students have used this legendary text. Suitable for either classroom use or self-paced study, it uses innovative discussions, cartoons, anecdotes, examples, and exercises that unfailingly capture and hold student interest. This edition is the Jacobs for a new generation. It has all the features that have kept the text in class by itself for nearly 3 decades, all in a thoroughly revised, full-color presentation that shows today's students how fun geometry can be. The text remains proof-based although the presentation is in the less formal paragraph format. The approach focuses on guided discovery to help students develop geometric intuition.

Deep-Water Processes and Facies Models: Implications for Sandstone Petroleum Reservoirs - G. Shanmugam 2006-03-31
This rock-based book is an attempt to link deep-water process sedimentology with sandstone petroleum reservoirs. In presenting a consistent process interpretation, the author has relied on his description and interpretation of core and outcrop (1:20 to 1:50 scale) from 35 case studies (which include 32 petroleum reservoirs), totaling more than 30,000 feet (9,145 m), carried out during the past 30 years (1974-2004).

This book should serve as an important source of information for students on history, methodology, first principles, advanced concepts, controversies, and practical applications on deep-water sedimentology and petroleum geology. * Discusses the link between deep-water process sedimentology and petroleum geology * Addresses criteria for recognizing deposits of gravity-driven, thermohaline-driven, wind-driven, and tide-driven processes in deep-water environments * Provides head-on approach to resolve controversial process-related problems

A Study in Derived Algebraic Geometry: Volume I: Correspondences and

Duality - Dennis Gaitsgory 2017
Derived algebraic geometry is a far-reaching generalization of algebraic geometry. It has found numerous applications in various parts of mathematics, most prominently in representation theory. This volume develops the theory of ind-coherent sheaves in the context of derived algebraic geometry. Ind-coherent sheaves are a "renormalization" of quasi-coherent sheaves and provide a natural setting for Grothendieck-Serre duality as well as geometric incarnations of numerous categories of interest in representation theory. This volume consists of three parts and an appendix. The first part is a survey of homotopical algebra in the setting of -categories and the basics of derived algebraic geometry. The second part builds the theory of ind-coherent sheaves as a functor out of the category of correspondences and studies the relationship between ind-coherent and quasi-coherent sheaves. The third part sets up the general machinery of the -category of correspondences needed for the second part. The category of correspondences, via the theory developed in the third part, provides a general framework for Grothendieck's six-functor formalism. The appendix provides the necessary background on -categories needed for the third part.

Post-Bonneville Paleoearthquake Chronology of the Salt Lake City Segment, Wasatch Fault Zone, from the 1999 "Megatrench" Site - James McCalpin 2002
This report presents the results of a paleoseismic investigation designed to date a long series of consecutive earthquakes on the Wasatch fault zone and to measure the variability of recurrence times between the events. Geologists have long recognized that the comparatively short average recurrence interval (compared to most other basin-and-range normal faults) between large surface-faulting earthquakes on the Salt Lake City segment of the Wasatch fault zone during mid- to late-Holocene time is potentially anomalous, and possibly affected by the rise and fall of Lake Bonneville. This study extends the paleoearthquake record back to Bonneville time, nearly doubling the previous record, and provides new information on the timing and periodicity of surface faulting on the Salt Lake City segment from the latest Pleistocene

through the Holocene. The trench and accompanying auger hole for this study exposed 26 meters of vertical section, roughly four times that of a typical paleoseismic trench on the Wasatch fault zone, hence the name "Megatrench."

Excel Essential Skills - A. S. Kalra 2004

Differential Geometry and Its Applications - John Oprea 2007-09-06
Differential geometry has a long, wonderful history it has found relevance in areas ranging from machinery design of the classification of four-manifolds to the creation of theories of nature's fundamental forces to the study of DNA. This book studies the differential geometry of surfaces with the goal of helping students make the transition from the compartmentalized courses in a standard university curriculum to a type of mathematics that is a unified whole, it mixes geometry, calculus, linear algebra, differential equations, complex variables, the calculus of variations, and notions from the sciences. Differential geometry is not just for mathematics majors, it is also for students in engineering and the sciences. Into the mix of these ideas comes the opportunity to visualize concepts through the use of computer algebra systems such as Maple. The book emphasizes that this visualization goes hand-in-hand with the understanding of the mathematics behind the computer construction. Students will not only "see" geodesics on surfaces, but they will also see the effect that an abstract result such as the Clairaut relation can have on geodesics. Furthermore, the book shows how the equations of motion of particles constrained to surfaces are actually types of geodesics. Students will also see how particles move under constraints. The book is rich in results and exercises that form a continuous spectrum, from those that depend on calculation to proofs that are quite abstract.

MISTAKE #2: PLEASE REMOVE - John Martoni 1949
Metropolis is an award-winning K-12 project-based ("STEAM") curriculum used by teachers, museum educators, non-profits, architects, urban planners, government agencies and other adults interested in engaging children in city planning. The common-core aligned curriculum was developed by John Martoni, an urban planner and sixth-grade teacher in Southern California. Students are presented with a series of design challenges that take them step-by-step through the process of designing their very own eco-friendly city of the future (while learning about planning issues such as sustainability and sprawl). Metropolis offers students an opportunity to use a creative design process to express their heritage, interests, and ideas while doing this fun, hands-on design project. It is a standards-based, interdisciplinary unit of study that can be easily adapted for students in upper elementary grades, middle school and high school. The new 2022 version of Metropolis is remarkably comprehensive. Bonus chapters include: -Applying what you know to improve your neighborhood -Model-building -Planning an exhibition -Planning for pandemics -Career Corner -Climate Change Metropolis is a multidisciplinary, standards-based curriculum that embeds language arts, mathematics, health, art, science, and social studies throughout. Metropolis can be adapted to a variety of contexts. The core design exercises are in Chapters 1-6. These include: Edges, Public Spaces, Landmarks, Transportation, Districts, and "Putting it all Together." After completing the core design exercises, students will have a green, multicultural and kid-friendly city of their own that they designed themselves! Beyond the basic design exercises in chapters 1-6, you can pick-and-choose the parts that are pertinent for your goals and time constraints. You can add, delete or modify lessons according to your needs! For example, an urban planner doing youth outreach might have time constraints, and choose not to go beyond the basic six lessons (skipping the vocabulary, reading and writing extensions). Those with a bit more time can add model-building to the project (either building models of landmarks designed in Chapter 3 or building a model of an entire city made of recyclables described in Chapter 7). Another option for those with more time is to add a community improvement project (Chapter 8). Doing the projects to scale requires a lot more time. It also requires more patience and individualized help for students. Scale is a difficult concept for many children, and is only recommended for grades 4 and above. Classroom teachers that would like a complete, interdisciplinary, project-based, thematic unit will appreciate all of the components of the entire curriculum. Metropolis could be an on-going activity on Friday afternoons (I recommend a two-hour block); or it could be a month-long, full-time, all-day curriculum unit that encompasses math, language arts, art, social studies and science. Teachers might use the curriculum exactly as it is written in its entirety; or they may choose to modify parts (such as the vocabulary or writing assignments) so that they are more relevant to their classroom contexts. SOME WAYS METROPOLIS CAN BE USED IN SCHOOLS: -Extension of history courses (connecting history to the present and future) -Interdisciplinary Thematic Unit to Teach Core Subjects -Elective Course -After School Club -GATE (Gifted and Talented Education) Enrichment Activity -VAPA

Unit (Visual and Performing Arts) USES OF METROPOLIS OUTSIDE OF SCHOOL: -Youth Outreach by Architects, Urban Planners or Local Government -Architecture Centers & Museum Educators (to complement exhibits with urban themes) -Non-profits and NGOs interested in civic engagement of youth -Home schooling -After-school childcare -Parks and Recreation Programs -Children's Section of Public Libraries 21st CENTURY SKILLS EMPHASIZED IN METROPOLIS: -Collaboration -Communication -Empathy -Adaptability -Critical Thinking -Creativity -Multiculturalism PEDAGOGIES EMBEDDED IN METROPOLIS: -Project-Based Learning -Design Thinking -STEAM Education (Science, Technology, Engineering, Art and Mathematics) -Integrated Thematic Instruction -Place-Based Learning COMMON CORE STANDARDS & CONTENT AREAS COVERED IN METROPOLIS: LANGUAGE ARTS: -Reading Comprehension (informational text and graphics) -Writing (informative, opinion and narrative) -Vocabulary/Word Study (including affixes/root words and Spanish cognates) -Speaking & Listening (discussion questions and presentations) MATH: -Geometry -Measurement -Data & Tables -Option of incorporating scale into projects (which gives authentic opportunities for making calculations and using fractions/decimals) SOCIAL STUDIES: -Maps, Charts and Tables -Connects the past with the present and future (works well as an extension after studying local, state or national history) -Multiculturalism & diversity woven throughout -Global perspective and international content -Civic engagement SCIENCE: -Sustainability, ecology & environmental science -Complementary to engineering units such as bridges, skyscrapers or tunnels VISUAL ARTS: -Career education -Multimedia projects that encourage creativity -Architecture & Urban Design -Model-building -Cartography HEALTH: -Promotes active transportation -Raises awareness of pollution and climate change (Green cities) -Encourages waste reduction (Reuse, Recycle, Reduce) (It is highly encouraged that models be made from recyclables)
