Ecology of Hierarchical Landscapes - Jiquan Chen 2006

The idea for this book grew out of: (1) the realisation that development of the theory of landscape ecology has now reached the point where rigorous field work is required to validate models, test assumptions and ideas of scaling theory, and refine our understanding of landscape features and their delineation; (2) the relative scarcity of compilations that have examined the role of field research or interdisciplinary management applications in advancing the science of landscape ecology; and (3) the increasing amount of information coming out of the Chequamegon Integrated Field Project (CIFP) on relevant topics. This book synthesises the experiences and lessons learned from the CIFP project and other relevant landscape studies in an attempt to demonstrate the utility of field studies and emerging technology to the advancement of the science. This book is organised to synthesise and update knowledge on research topics mentioned previously, with an emphasis on ecological consequences (i.e., implications for ecological function) of the approach to and understanding of these topics across levels of the ecological hierarchy.

Forensics in Law Enforcement - Maria V. Shoester 2006

In recent years forensic DNA evidence has been used by agencies and actors in the criminal justice system more and more frequently to both convict the guilty and exonerate the innocent. Cases that previously may have been unsolveable have been transformed into solvable cases where viable suspects can be identified and arrested or removed from suspect lists. This book presents examinations of how DNA, and some other forensic methods, are being used by our justice system and the issues that surround these uses. Focus on Applied Statistics - Mohammad Ahsanullah 2003

Mathematicians and statisticians from North America, Europe, Asia, and the Middle East synthesize the recent literature on statistical methods. Their topics include a family of estimators for the coefficient of determination in linear regression models, the quasi-random sequences in the random processes modeling

algorithms, locating a change point in a Gaussian model when an outlier is present, the classical and Bayesian reliability estimation of the negative binomial distribution, a shrinkage estimation of the exponential reliability with censored data, and optimal equivariant vector prediction in location families. Muir Wood: Constitutive modelling. - C. di Prisco: Creep versus transient loading effects in geotechnical problems. - M. Pastor et al.: Mathematical models for transient, dynamic and cyclic problems in geotechnical engineering. - M. Pastor: Discretization techniques for transient, dynamics and cyclic problems in geotechnical engineering: first order hyperbolic partial diffential equations. - M. Muir Wood: Macroelement modelling. - M. F. Randolph: Offshore design approaches and model tests for sub-failure cyclic loading of foundations. - M.F. Randolph: Cyclic interface shearing in sand and cemented solis and application to axial response of piles. - M. F. Randolph: Evaluation of the remoulded shear strength of offshore clays and application to pipline-soil and riser-soil interaction. The book gives a comprehensive description of the mechanical response of soils (granular and cohesive materials) under cyclic loading. It provides the geotechnical engineer with the theoretical and analytical tools necessary for the evaluation of settlements developing with time under cyclic, einvironmentally idncued loads (such as

wave motion, wind actions, water table level variation) and their consequences for the serviceability and durability of structures such as the shallow or deep foundations used in offshore engineering, caisson beakwaters, ballast and airport pavements and also to interpret monitoring data, obtained from both natural and artificial slopes and earth embankments, for the purposes of risk assessment and mitigation.
